AWS CendekiAwan 2.0 — Showcase Pitch Notes

Oct 9, 2026 · @Su Ann

Run of show

Each group gets a maximum of 5 minutes on stage, with no judging, scoring, or formal Q&A.

Timeline is tentative. Coach says the times below are not confirmed and may shift a bit; the order of events should stay the same.

Time	What happens
9:00	Finalist setup
10:00	Arrival & registration
10:10	Welcome & opening remarks
10:30	Finalist showcase (Groups 1–5)
11:20	Awards & appreciation
11:35	Closing remarks
11:50	Group photo & close

Five showcase categories:

- GovTech & Social Impact
- Smart Education
- Financial Inclusion & SME
- Digital Health
- Sustainable Environment & Climate

The 5-minute demo structure

Five segments. Rehearse the hand-offs between speakers as carefully as the content.

Time	Segment	What to cover
0:00–0:45	1. Problem Statement	Named persona, specific problem, why it matters
0:45–1:30	2. Solution Overview	What the app does, and WHY it needs AI rather than a form or database
1:30–3:30	3. Live Demo	Open the deployed AWS app, 2–3 real inputs, meaningful outputs
3:30–4:15	4. Real-World Impact	Who benefits, how it scales, one real Malaysian organisation
4:15–5:00	5. Closing & Readiness	End on impact with your strongest line on why this matters

Questions to be ready for

Every member should be able to answer these, not just the presenter.

Segment 1: Problem Statement (0:00–0:45)

The problem must be real and specific, not generic.

Question	Strong answer	Weak answer
Who EXACTLY has this problem? Give me a name.	One concrete persona: name, age, job, and the specific situation they are in	"Everyone", "students", "the general public"
Before your app, how did people solve this problem?	Name the existing solution and the gap you fill. Show you researched it	"There was no solution before."
What's the evidence? Data, or did you talk to real users?	One statistic, one real story, or one direct user conversation	"We feel…" / "We believe…" with no evidence

Segment 2: Solution Overview (0:45–1:30)

The one you must be able to answer: "Why does this need AI? Why not just a form or a search engine?"

- Say: name specific AI capabilities (natural-language understanding, contextual responses, processing unstructured input) and tie each one to your user's problem.

- Avoid: "AI is powerful / the future / more modern".

Question	Strong answer	Weak answer
What makes your app different from other solutions?	Local context (BM / dialect), Malaysian systems integration, domain-specific prompts, UX built for your user	"Other solutions need a subscription."
What AWS services does it use? Walk me through the architecture.	User → Lambda → Bedrock API (name the model) → response. Every member must know this	Freezing, or pointing at each other

Segment 3: Live Demo (1:30–3:30)

No question slide was included for this segment. From the structure slide: open the deployed AWS app, run 2–3 real inputs, and show meaningful outputs.

Backup video: record a video of the live demo beforehand. If time runs short, the organisers may ask to see the video instead of a live run.

Segment 4: Real-World Impact (3:30–4:15)

Question	Strong answer	Weak answer
Name one real Malaysian org that would pilot this. Who do you call?	One real name: a school, clinic, NGO, MCMC, MDEC, or GLC. More specific = stronger	"Maybe someone would be interested."
If 100,000 users used this tomorrow, what breaks first?	Be honest: Lambda concurrency, Bedrock rate limits, or cost spikes. Self-awareness impresses any audience	"Nothing, AWS is scalable."
How much does it cost per user, per month?	Use the AWS Pricing Calculator beforehand. A rough estimate is fine	"We haven't calculated." / "It's free on sandbox."
Who gets left out? Who can't access your app?	Acknowledge gaps (smartphone, internet, digital literacy) and your plan to address them	"Our app is for everyone."

Segment 5: Closing & Readiness (4:15–5:00)

Question	Strong answer	Weak answer
What stops a big company from just copying this?	Your local moat: BM / dialect, Malaysian systems, the niche big players won't prioritise	"We're cheaper." / "We're more agile."
What did each member contribute? Who built what?	Decide who answers beforehand. Everyone owns a clear part; no one is just "design support"	One person answering for the whole team
If you had 3 more weeks, what would you improve first?	One specific, high-impact improvement for your user. Shows product thinking	"We'd improve everything."
Explain your app in one sentence to a minister who's never heard of AI.	[App] helps [who] to [do what] without having to [old barrier]. Memorise it	Starting with "So, our app uses Amazon Bedrock which…"

Pitch it like an investor pitch

Pitch as if the audience are investors: they want visibility on the economics, not just the tech.

Economic points to work in (suggested, fill in your own numbers):

- **Size of the problem:** how many people or organisations in Malaysia have it, and what it costs them now in money or time
- **Cost to run:** AWS cost per user, per month (Segment 4)
- **Value created:** money or hours saved per user, or new income it unlocks
- **Who pays:** the user, the pilot organisation, a government agency, or a sponsor
- **Scale:** what happens to cost and impact going from one pilot to 100,000 users
- **The ask:** what you need next (pilot partner, funding, cloud credits) and what it would achieve

Best fit: one line on problem size in Segment 1, the rest in Segment 4, and the ask in the closing.

3 things every member must know cold

1. **"Why does this need AI?"** Name specific capabilities a form or database cannot replace. Never use the words "powerful" or "modern".
2. **"Who exactly is your user?"** One concrete persona with a name, an age, and a specific situation, not a broad category.
3. **"Walk me through your AWS architecture."** User → Lambda → Bedrock API (name the model) → response displayed. Every member, no notes.

Pre-event checklist

Tick every box as a team. An unchecked box is exactly where the story will feel thin on stage.

- [ ] Every team member can answer the key questions about the project, not just one person
- [ ] The app has been tested with 10+ unusual or unexpected inputs
- [ ] One real Malaysian organisation identified as a potential pilot partner
- [ ] A rough AWS cost per user, per month, has been calculated
- [ ] The user persona has a name, an age, and a concrete situation
- [ ] "Why AI?" rehearsed with no use of "powerful" or "modern"
- [ ] Every member can explain the app's AWS architecture without notes

- [ ] A 15-second elevator pitch is memorised by all members
- [ ] Backup demo video recorded, in case there is no time for the live demo

Final reminders

- **Problem:** name your user, own the pain point.
- **Demo:** show it live, handle anything.
- **Impact:** name an org, know the cost.
